To whom it may concern

Reference for Pipe Technologies

City care has engaged the services of Pipe Technologies (Pipe Tech) for the sewer lining portion of the New Plymouth District Council Maintenance Contract. Pipe Tech was first engaged by City Care in 2012.

Each year Pipe Tech installs 150Ø, 225Ø and 300Ø AM Liner into Council's sewer network. From the planning of the job to final deliverables, Pipe Tech has always achieved a high standard of workmanship providing extended life to existing council assets.

The work involved dealing with land owners, setting out traffic management, preparation of pipes by cleaning and trimming protruding laterals.

Installation is undertaken in a safe environment with experienced installers complying with instruction and quality standards, planning of the job to final deliverables, the PipeTech team has always achieved a high standard of workmanship and provided back up support whenever required.

Their innovative Strategic Integrated Management Planning Application (SIMPA) allowed progress and quality to be followed by Council as the jobs progressed.

PipeTech's communication to both the client and the affected landowners was excellent. Detailed programmes were given to Council. The crews undertook their work in an efficient and safe manner taking great pride in their companies Health and Safety philosophy.

I would have no hesitation in recommending Pipe Tech to any future clients.

If you have any further queries, please do not hesitate to contact me on 027 200 4515

Yours sincerely

Tony Ewens
Branch Manager
